

Case Study

Adrian Bank

Evergy incentives cover over half of the bank's lighting project costs.

Opportunity

Adrian Bank wanted to upgrade the lighting and overall look in one of its three Missouri facilities. To achieve this goal, the bank reached out to Evergy. After hearing about the potential for Evergy incentives, upgrading to LEDs was a "no-brainer," said Adrian Bank Manager Caleb Jeter.

Project

A total of 80 new LED linear lamps and four omnidirectional A-series LEDs were installed in Adrian Bank's facility, replacing the existing lighting. Given that the bank is the size of a small office, this was a major renovation.

Results

Adrian Bank received \$640 in incentives from Evergy, covering over half of the total project cost. The bank saved 3,427 kWh, which is equivalent to the greenhouse gas emissions from 6,251 miles driven by an average passenger vehicle and the carbon dioxide emissions from 2,790 lb of coal burned, according to U.S. Environmental Protection Agency calculations.

The bank was so pleased with the results, it underwent energy efficiency renovations at additional locations.
